

TEAM O'NEIL RALLY SCHOOL

FACILITIES & MAP

The South End

Our southern course has been up and running for 15 years, and is the main area that we use to do most of our driving programs. The south end is also our main entrance, and home to our shop and classroom facilities as well as our offices.

The south end driving areas consist of a large, safe skidpad and slalom area that you'll learn and practice on for the first few days of class, as well as several miles of easy rally roads and enough advanced terrain to challenge even the most experienced drivers.

The North End

Our Northern Course was engineered and constructed to essentially duplicate the Southern Course so that we could run two classes at once, or have rally cars testing without interfering with our students' seat time. The Northern course also offers us a second option to choose from in tough weather conditions, as it's around 800 feet higher in elevation and on the back side of our mountain, so it stays frozen longer and gets more snow in general than our South End.

The North End consists of an enormous skidpad and slalom area (larger than the South End,) as well as miles of rally roads again running the gambit between easy, intermediate, and advanced terrain.

Off-Road Course

Team O'Neil has been teaching low speed, technical off-road driving for many years. Our instructors are some of the best in the country and have decades of off-road experience. The value of left foot braking off-road is something too often overlooked by drivers, and proper technique in all off road situations is often the only way to safely and consistently make it to the end of the trail with a working vehicle underneath you.

Our purpose-built off road playgrounds and curriculum will give you a basic understanding of left foot braking and teach you the fundamentals of off-roading, and our miles of trails range from beginner to intermediate, with several advanced areas that will challenge even the most experienced drivers.
